Author index

Akan, G.T., 49
Arditi, D., 49, 193
Baron, T., 13
Baxendale, T., 201
Bennett, J., 225
Brandon, P.S., 111
Bryant, D.T., 177
Cherns, A.B., 177
Cusack, M.M., 219
Eckblad, J., 145
Edwards, B., 145
Flanagan, R., 133
Furusaka, S., 157
Ghaswala, S.K., 265
Gray, C., 133, 157
Hughes, W.P., 93
Imre, M., 49
Jenkins, A.W., 25
Lewis, T.M., 37
McDonald, P.R., 1
Morrison, N., 57
Ofori, G., 127
Ormerod, R.N., 225
Runeson, G., 185
Scott, D., 77
Uher, T.E., 185
Walker, A., 93

Construction Management and Economics, 1984, **2**, 274–276

Subject index

Abandonment, acceleration, claims, damages, delays, defective work, 1
Acceleration, claims, damages, delays defective work, abandonment, 1
Accuracy, variability, quantity surveyor, cost estimating, cost planning, 57
Adaptability, economic adjustment, operating difficulties, rationalization, 127
All-zero-one integer programming, dynamic programming, combination of cranes, construction management, crane location, 157

Benefit–cost analysis, highway improvement projects, priority ranking, economic evaluation, 49
Benefits, costs, projects, evaluation, 77
Bid-shopping, price negotiations, subcontractors, general contractors, tendering, 185
British, construction industry, Motivation, 145
Building, linear responsibility analysis, systems theory, project management, case study, private industry, 93
Building activity, social policy, construction wage settlements, inflation, 25

Case study, private industry, building, linear responsibility analysis, systems theory, project management, 93
Civil engineering education, graduate programmes in construction, construction management, 193
Claims, damages, delays, defective work, abandonment, acceleration, 1
Client complexity, clinent involvement in construction management, communications in project management, project team organization, temporary multiorganization, 177
Client involvement in construction management, communications in project management, project team organization, temporary multiorganization, client complexity, 177
Combination of cranes, construction management, crane location, all-zero-one integer programming, dynamic programming, 157
Communications in project management, project team organization, temporary multiorganization, client complexity, client involvement in construction management, 177
Construction industry, motivation, British, 145
Construction industry, problems with performance, organization, services, labour productivity, 37
Construction management, civil engineering education, graduate programmes in construction, 193
Construction management, crane location, all-zero-one integer programming, dynamic programming, combination of cranes, 157
Construct project, ILP, heuristic models, planning, control, 219
Construction site, data collection, simulation, resource models, 201
Construction wage settlements, inflation, building activity, social policy, 25

Contracts, productivity, International comparison, 133
Control, construction project, ILP, heuristic models, planning, 219
Cost estimating, cost planning, accuracy, variability, quantity surveyor, 57
Cost models, cost planning, quality, cost yardsticks, 111
Cost planning, accuracy, variability, quantity surveyor, cost estimating, 57
Cost planning, quality, cost yardsticks, cost models, 111
Cost yardsticks, cost models, cost planning, quality, 111
Costs, projects, evaluation, benefits, 77
Crane location, all-zero-one integer programming, dynamic programming combination of cranes, construction management, 157
Damages, delays, defective work, abandonment, acceleration, claims, 1
Data collection, simulation, resource models, construction site, 201
Defective work, abandonment, acceleration, claims, damages, delays, 1
Delays, defective work, abandonment, acceleration, claims, damages, 1
Demolition, house builders, inner cities, management teams, rehabilitation, 13
Dynamic programming, combination of cranes, construction management, crane location, all-zero-one integer programming, 157
Economic adjustment, operating difficulties, rationalization, adaptability, 127.
Economic evaluation, benefit–cost analysis, highway improvement projects, priority ranking, 49
Evaluation, benefits, costs, projects, 77
General contractors, tendering, bid-shopping, price negotiations, subcontractors, 185
Graduate programmes in construction, construction management, civil engineering education, 193
heuristic models, planning, control, construction project, ILP, 219
Highway improvement projects, priority ranking, economic evaluation, benefit–cost analysis, 49
House builders, inner cities, management teams, rehabilitation, demolition, 13
ILP, heuristic models, planning, control, construction project, 219
Inflation, building activity, social policy, construction wage settlements, 25
Inner cities, management teams, rehabilitation, demolition, house builders, 13
Interference, variability, uncertainty, risk, simulation, 225
International comparison, contrasts, productivity, 133
Labour productivity, construction industry, problems with performance, organization, services, 37
Linear responsibility analysis, systems theory, project management, case study, private industry, building, 93
Management teams, rehabilitation, demolition, house builders, inner cities, 13
Motivation, British, construction industry, 145
Operating difficulties, rationalization, adaptability, economic adjustment, 127
Organization, services, labour productivity, construction industry, problems with performance, 37
Planning, control, construction project, ILP, heuristic models, 219
Price negotations, subcontractors, general contractors, tendering, bid-shopping, 185
Priority ranking, economic evaluation, benefit–cost analysis, highway improvement projects, 49
Private industry, building, linear responsibility analysis, systems theory, project management, case study, 93
Problems with performance, organization,

services, labour productivity, construction industry, 37
Productivity, international comparison, contracts, 133
Project management, case study, private industry, building, linear responsibility analysis, systems theory, 93
Project team organization, temporary multiorganization, client complexity, client involvement in construction management, communications in project management, 177
Projects, evaluation, benefits, costs, 77

Quality, cost yardsticks, cost models, cost planning, 111
Quantity surveyor, cost estimating, cost planning, accuracy, variability, 57

Rationalization, adaptability, economic adjustment, operating difficulties, 127
Rehabilitation, demolition, house builders, inner cities, management teams, 13
Resource models, construction site, data collection, simulation, 201
Risk, simulation, interference, variability, uncertainty, 225

Services, labour productivity, construction industry, problems with performance, organization, 37
Simulation, interference, variability, uncertainty, risk, 225
Simulation, resource models, construction site, data collection, 201
Social policy, construction wage settlements, inflation, building activity, 25
Subcontractors, general contractors, tendering, bid-shopping, price negotiations, 185
Systems theory, project management, case study, private industry, building, linear responsibility analysis, 93

Temporary multiorganization, client complexity, client involvement in construction management, communications in project management, project team organization, 177
Tendering, bid-shopping, price negotiations, subcontractors, general contractors, 185

Uncertainty, risk, simulation, interference, variability, 225

Variability, quantity surveyor, cost estimating, cost planning, accuracy, 57
Variability, uncertainty, risk, simulation, interference, 225
